

Dear Dr. \_\_\_\_\_,

My child is a patient of yours and as you know we are part of a large dup15q community dedicated to understanding characteristics of dup15q syndrome. In order to help understand the syndrome better, the Dup15q Alliance (patient advocacy group) is supporting a research study that can put our son/daughter's EEG, MRI and Sleep Study to be compared with other kids with the syndrome. Additionally, this research study also investigates overnight sleep EEGs in Dup15q children, to better inform sleep disturbances.

In order for us to participate in this study, we need a copy of our child's EEG recording. This can be a few minutes of clinical EEG recording and/or overnight sleep EEG recording, whichever was collected at your clinic during our visit. Along with EEG, any , MRI, Sleep Study or other relevant medical information collected during the visit would be great to have.

It will be great if you could let us know of any paperwork involved to get this process started. We are very eager to participate in this research study and very much appreciate your help in sending us the recordings and medical information collected during our visit.

Thank you!
